## SECURE CHECK PRESENTATION DEVICE

A secure billfold for facilitating a service establishment transaction, comprising two symmetrical panels each having four sides with walls extending from each side to form an interior portion; wherein the walls are of sufficient depth to securely 10 contain a credit card, guest check and writing implement, and have edges which meet when the billfold is closed. The panels are attached together such that the billfold opens and closes easily and includes at least one fastener for securely closing said panels. In a specific embodiment a guest check presentation device is provided comprising a closable container having a cover region fold ably 15 connected to a base region and at least one closure means for securely fastening the cover and base regions. At least one credit card receiving aperture is present in an edge of either the cover or base and at least one credit card holder is affixed to the interior of the either the cover or base in proximity to the card receiving aperture. The guest check presentation device enables a patron or the staff of a 20 service establishment to securely contain a guest check, receipt, credit card, writing implement, loose change and the like and transport it safely between the register station and the guest's location.
